

Applying RMA in Real-Life

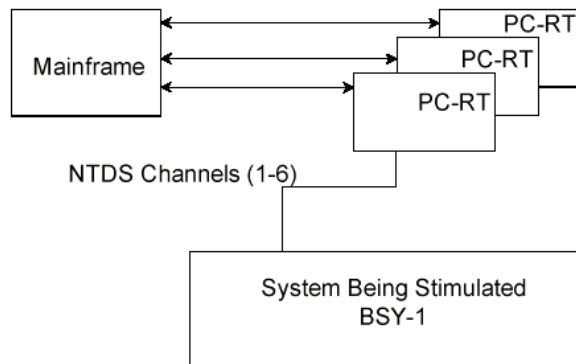

(It can do more than one might think!)

Raj Rajkumar
Lecture #20

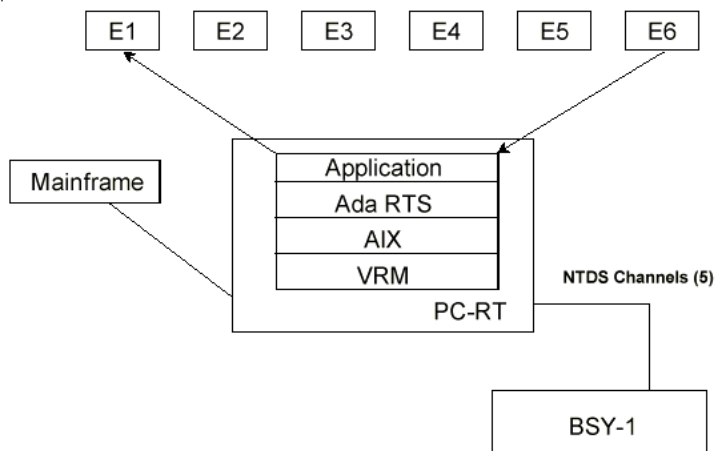

Overview of BSY-1 Submarine Trainer

- This case study is interesting for several reasons:
 - RMS is not used, yet the system is analyzable using RMA
 - “Obvious” solutions would not have helped
 - RMA correctly diagnosed the problem
- Insights to be gained:
 - Devastating effects of **non-preemption**
 - How to apply RMA to a **round-robin scheduler?**
 - Contrast conventional wisdom about **interrupt handlers** with the results of RMA

ENGINEERING

Problem Analysis by Development Team

- During integration testing, the PC-RT could *not* keep up with the mainframe computer.
- The problem was perceived to be inadequate throughput in the PC-RT.
- Actions planned to solve the problem:
 - move processing out of the application and into OS interrupt handlers.
 - improve the efficiency of AIX (IBM's Unix) signals.
 - eliminate the use of Ada in favor of C.

Data from RMA Investigation

$$C = C_i \text{ (interrupt time)} + C_a \text{ (application time)}$$

	C_i (msec)	C_a (msec)	C (msec)	T (msec)	U
Event 1	2.0	0.5	2.5	43	0.059
Event 2	7.4	8.5	15.9	74	0.215
Event 3	6.0	0.6	6.6	129	0.052
Event 4	21.5	26.7	48.2	258	0.187
Event 5	5.7	23.4	29.1	1032	0.029
Event 6	2.8	1.0	3.8	4128	0.001
Total					0.543

$$U_i = C_i/T_i$$

- Observe that total utilization is only 54%; the problem is **not** insufficient throughput.

Schedulability Model: Original Design

$$(1) \frac{C_1}{T_1} + \left[\frac{C_2 + C_3 + C_4 + C_5 + C_6}{T_1} \right] \leq U(1)$$

Preemption Execution

Blocking

$$(2) \left[\frac{C_{1,I}}{T_1} \right] + \frac{C_2}{T_2} + \left[\frac{C_{1,A} + C_3 + C_4 + C_5 + C_6}{T_2} \right] \leq U(2)$$

$$(3) \left[\frac{C_{1,I}}{T_1} + \frac{C_{2,I}}{T_2} \right] + \frac{C_3}{T_3} + \left[\frac{C_{1,A} + C_{2,A} + C_4 + C_5 + C_6}{T_3} \right] \leq U(3)$$

$$(4) \left[\frac{C_{1,I}}{T_1} + \frac{C_{2,I}}{T_2} + \frac{C_{3,I}}{T_3} \right] + \frac{C_4}{T_4} + \left[\frac{C_{1,A} + C_{2,A} + C_{3,A} + C_5 + C_6}{T_4} \right] \leq U(4)$$

(5)

(6)

Schedulability Test: Original Design

$$(1) \frac{2.5}{43} + \left[\frac{15.9 + 6.6 + 48.2 + 29.1 + 3.8}{43} \right] \leq U(1)$$

$$(2) \left[\frac{2.0}{43} \right] + \frac{15.9}{74} + \left[\frac{(0.5) + 6.6 + 48.2 + 29.1 + 3.8}{74} \right] \leq U(2)$$

$$(3) \left[\frac{2.0}{43} + \frac{7.4}{74} \right] + \frac{6.6}{129} + \left[\frac{(0.5 + 8.5) + 48.2 + 29.1 + 3.8}{129} \right] \leq U(3)$$

$$(4) \left[\frac{2.0}{43} + \frac{7.4}{74} + \frac{6.6}{129} \right] + \frac{48.2}{258} + \left[\frac{(0.5 + 8.5 + 0.6) + 29.1 + 3.8}{258} \right] \leq U(4)$$

$$(5) \left[\frac{2.0}{43} + \frac{7.4}{74} + \frac{6.6}{129} + \frac{21.5}{258} \right] + \frac{29.1}{1032} + \left[\frac{(0.5 + 8.5 + 0.6 + 26.7) + 3.8}{1032} \right] \leq U(5)$$

$$(6) \left[\frac{2.0}{43} + \frac{7.4}{74} + \frac{6.6}{129} + \frac{21.5}{258} + \frac{5.7}{1032} \right] + \frac{3.8}{4128} + \left[\frac{(0.5 + 8.5 + 0.6 + 26.7 + 23.4)}{4128} \right] \leq U(6)$$

Utilization: Original Design

	Period (msec)	Preempt	Execute	Blocking	Total U
Event 1	43	0.000	0.059	2.410	2.469
Event 2	74	0.047	0.215	1.192	1.454
Event 3	129	0.147	0.052	0.699	0.898
Event 4	258	0.194	0.187	0.165	0.546
Event 5	1032	0.278	0.029	0.039	0.346
Event 6	4128	0.284	0.001	0.015	0.300
Total			0.543		

- The problem is excessive blocking (“priority inversion”) for events 1, 2 and 3.

Remember that U *cannot* be greater than 1.0 for any system and for RMS, it can even be lower for non-harmonic tasksets.

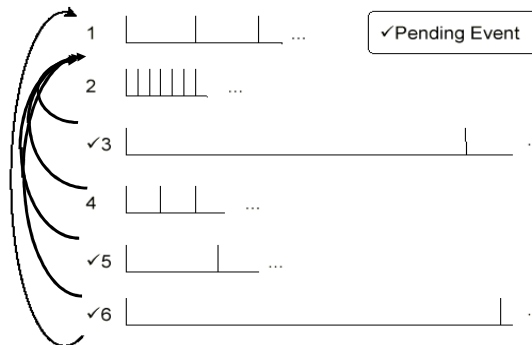

Process Events in RM Order

	E1	E2	E3	E4	E5	E6
U	5.9%	21.5%	5.2%	18.7%	2.9%	0.1%
C_i (msec)	2.0	7.4	6.0	21.5	5.7	2.8
C_a (msec)	0.5	8.5	0.6	26.7	23.4	1.0
T (msec)	43	74	129	258	1032	4128

```

start:  $i = 1$ ;
cont: if event  $i$  pending,
        process event  $i$ 
        go to start
    else
         $i = (i+1) \bmod n$ 
        go to cont
    endif

```

Schedulability Model: RM Design

$$\begin{aligned}
 (1) \quad & \underbrace{\frac{C_1}{T_1}}_{\text{Preemption}} + \underbrace{\left[\frac{\max(C_{2,A}, C_{3,A}, C_{4,A}, C_{5,A}, C_{6,A}) + C_{2,I} + C_{3,I} + C_{4,I} + C_{5,I} + C_{6,I}}{T_1} \right]}_{\text{Execution}} \\
 (2) \quad & \left[\frac{C_1}{T_1} \right] + \frac{C_2}{T_2} + \left[\frac{\max(C_{3,A}, C_{4,A}, C_{5,A}, C_{6,A}) + C_{3,I} + C_{4,I} + C_{5,I} + C_{6,I}}{T_2} \right] \\
 (3) \quad & \left[\frac{C_1}{T_1} + \frac{C_2}{T_2} \right] + \frac{C_3}{T_3} + \left[\frac{\max(C_{4,A}, C_{5,A}, C_{6,A}) + C_{4,I} + C_{5,I} + C_{6,I}}{T_3} \right] \\
 (4) \quad & \left[\frac{C_1}{T_1} + \frac{C_2}{T_2} + \frac{C_3}{T_3} \right] + \frac{C_4}{T_4} + \left[\frac{\max(C_{5,A}, C_{6,A}) + C_{5,I} + C_{6,I}}{T_4} \right] \\
 (5) \quad & \left[\frac{C_1}{T_1} + \frac{C_2}{T_2} + \frac{C_3}{T_3} + \frac{C_4}{T_4} \right] + \frac{C_5}{T_5} + \left[\frac{C_6}{T_5} \right] \\
 (6) \quad & \dots
 \end{aligned}$$

Schedulability Test: RM Order

$$\begin{aligned}
 (1) \quad & \frac{2.5}{43} + \left[\frac{26.7 + 7.4 + 6.0 + 21.5 + 5.7 + 2.8}{43} \right] \leq U(1) \\
 (2) \quad & \left[\frac{2.5}{43} \right] + \frac{15.9}{74} + \left[\frac{(26.7) + 6.0 + 21.5 + 5.7 + 2.8}{74} \right] \leq U(2) \\
 (3) \quad & \left[\frac{2.5}{43} + \frac{15.9}{74} \right] + \frac{6.6}{129} + \left[\frac{(26.7) + 21.5 + 5.7 + 2.8}{129} \right] \leq U(3) \\
 (4) \quad & \left[\frac{2.5}{43} + \frac{15.9}{74} + \frac{6.6}{129} \right] + \frac{48.2}{258} + \left[\frac{(23.4) + 5.7 + 2.8}{258} \right] \leq U(4) \\
 (5) \quad & \left[\frac{2.5}{43} + \frac{15.9}{74} + \frac{6.6}{129} + \frac{48.2}{258} \right] + \frac{29.1}{1032} + \left[\frac{3.8}{1032} \right] \leq U(5) \\
 (6) \quad & \left[\frac{2.5}{43} + \frac{15.9}{74} + \frac{6.6}{129} + \frac{48.2}{258} + \frac{29.1}{1032} \right] + \frac{3.8}{4128} \leq U(6)
 \end{aligned}$$

Utilization: RM Design

	Period (msec)	Preempt	Execute	Blocking	Total U	Previous Total
Event 1	43	0.000	0.059	1.631	1.690	2.469
Event 2	74	0.059	0.215	0.848	1.122	1.454
Event 3	129	0.274	0.052	0.440	0.766	0.898

BSY-1 Trainer Case-Study Summary

- Recall original action plan:
 - improve efficiency of AIX signals
 - move processing from application to interrupts
 - recode 17,000 lines of Ada to C
- Final actions:
 - increase preemption and improve AIX
 - move processing from interrupts to application
 - modify 300 lines of Ada code
 - RMA took 3 people and 3 weeks

Summary of Lecture

- Applying RMA to real-time systems
 - Can be applied to systems that did not use Rate-Monotonic Scheduling or Deadline-Monotonic Scheduling
 - can be applied to systems doing round-robin scheduling, for example
- Conclusions drawn without understanding real-time scheduling theory can be widely off.
- Knowing real-time scheduling theory, **simple fixes at the right places** can solve what seem to be fundamental design and performance problems.
